EDUCATION

The University of Texas at Dallas

Bachelor of Science in Computer Engineering

Richardson, TX

Aug 2024 – Dec 2027

Honors: Academic Excellence Scholar

Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Discrete Mathematics, Probability & Statistics, Digital Circuits, Artificial Intelligence, Embedded Systems

EXPERIENCE

Frontend Developer

Comet Aviation

Aug 2025 – Present

Richardson, TX

- Developed and maintained Comet Aviation's web platform using React and TypeScript, building responsive components and event-management functionality for the organization's public-facing website.
- Managed the development lifecycle with non-technical club leadership, translating requirements into technical specifications and delivering documented, production-ready features deployed through Cloudflare.

Software Engineering Intern

Care Impact

June 2025 – Aug 2025

Leander, TX

- Designed and deployed a Python-based pipeline using Selenium to automate retrieval of patient medical records from a client portal, supporting device recommendation workflows.
- Automated migration of 5,000+ patient records into Care Impact's databases, replacing manual data-entry, saving \$10,000+ in costs by creating a reusable data pipeline.

PROJECTS

Personal Portfolio - krish544.com

Nov 2024 – Present

- Built and deployed a React/TypeScript portfolio with serverless APIs using Cloudflare Pages Functions, Supabase/PostgreSQL, and Drizzle ORM for authenticated comments and persistent application data.
- Developed media-processing utilities and interactive games using React, TypeScript, and Python.
- Implemented CI/CD workflows using GitHub Actions to automatically install dependencies, lint, and test changes on pushes and pull requests, with production builds automatically deployed through Cloudflare.

Hand Gesture Recognition Platform - github.com/Krish54491/Hand-Recognizer

May 2026 – Sept 2026

- Developed two real-time hand gesture recognition models supporting 26 gestures each with 250+ samples per gesture, achieving 94% held-out accuracy and <70 ms inference latency using Python and MediaPipe.
- Built an end-to-end ML pipeline enabling users to collect samples, define custom gestures, train and retrain models, and persist 10,000+ landmark records using PostgreSQL.
- Implemented an opt-in feedback pipeline that captures hand landmarks during inference and incorporates user-contributed samples into future model retraining.
- Developed a cross-platform desktop application using Rust, Dioxus, and FastAPI with encrypted credential storage and automated update delivery.

Hacklahoma 2026 - 1st Place Winner(PianoWizards)

Feb 2026 – Feb 2026

- Architected and deployed a real-time multiplayer piano game with isolated room management, synchronized client-server state, and low-latency WebSockets communication.
- Designed a fault-tolerant turn-based game engine with backend state transitions and custom melody validation (± 300 ms timing tolerance).

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, Rust, C++

Frameworks & Libraries: React, Node.js, Express, Flask, Next.js, Tailwind CSS, OpenCV, TensorFlow, FastAPI, Selenium, React Router, Drizzle ORM, MoviePy, Dioxus

Databases and Cloud: PostgreSQL, Supabase, Cloudflare, Google Cloud Platform

Tools: Git, GitHub Actions, Docker, Linux, Vite, Selenium, Fusion 360, Playwright
